

Client Report: Report Live Entity

Executive Summary

The current AML readiness review outcome for Report Live Entity is BLOCKED. Seven findings have been identified, each requiring remediation and evidence substantiation before deployment can be considered.

Key Findings

- ? Transaction monitoring framework documented
- ? Sanctions screening program defined
- ? Enterprise AML policy approved and version controlled

Missing Controls

Critical missing controls include AML-001 (Enterprise AML policy approved and version controlled), AML-002 (Customer risk rating methodology defined), AML-003 (Transaction monitoring framework documented), GOV-001 (Compliance governance roles and escalation paths defined), KYB-001 (Beneficial ownership and business verification controls documented), KYC-001 (Customer identification procedures documented), and SAN-001 (Sanctions screening program defined).

Remediation Priorities

Immediate remediation (0-30 days) must focus on the transaction monitoring framework and sanctions screening program, both critical controls. Near-term efforts (30-90 days) should address the enterprise AML policy, customer risk rating methodology, compliance governance roles, beneficial ownership controls, and customer identification procedures. Remediation progress will require documented evidence and human-reviewed validation before the entity can progress towards deployment readiness.
